

# PR ROLLS NEWSLETTER 2014

+ Remove sticking and dusting

+ Improve runnability

+ Extended energy saving due to

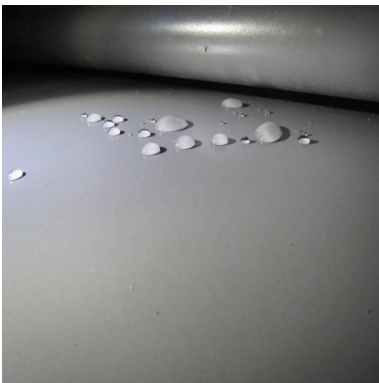

clean and corrosion-free dryer surface

**+ TecnoClean Cera Hybrid +**

## THE NEW ERA OF NON-STICK COATINGS IS HERE

Non-stick coatings have never been such a high quality before – **TecnoClean Cera Hybrid** is specially designed to deliver excellent non-stick and wear resistance for paper rolls and dryers.

Our latest coating can be easily applied in the machine with good results and yet having even better performance than all the comparable coatings ever.

*“During the last years we have heavily invested into this development project and the latest positive responds from the market are really rewarding”:* **Mr Ingmar Vesterlund**, CEO of PR Rolls comments and continues: *“we had a clear request from our customers for an improved non-stick coating - modern quality requirement and high usage of recycled fibers are setting higher demands for paper machine runnability.”*

MetsäBoard, Kemi Art factory, who is the worlds leading manufacturer of double-coated white-top kraft-liner has installed **TecnoClean Cera Hybrid** into the first dryer after coating station. Performance of the new coating quality is excellent.
